

In This Chapter, We Will Address the Following Questions

1. How can market leaders expand the total market and defend market share?
2. How should market challengers attack market leaders?
3. How can market followers or nichers compete effectively?
4. What marketing strategies are appropriate at each stage of the product life cycle?
5. How should marketers adjust their strategies and tactics for an economic downturn or recession?

Players such as Tata Motors and Maruti Suzuki offer a number of models and variants at many price points, catering to a diverse set of customers in today's competitive and rapidly evolving automobile market.

Competitive Dynamics

To be a long-term market leader is the goal of any marketer. Today's challenging marketing circumstances, however, often dictate that companies reformulate their marketing strategies and offerings several times. Economic conditions change, competitors launch new assaults, and buyer interest and requirements evolve. Different market positions can suggest different market strategies.

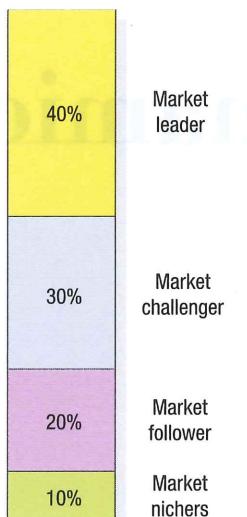

With over 20 major players and more than 90 models and brands offering upwards of 360 variants,¹ the market for passenger cars and sports utility vehicles in India is a fiercely competitive arena. While this market has recorded impressive growth in recent times, the competitive landscape is highly dense, with formidable brands from Maruti Suzuki and domestic majors such as Tata Motors and Mahindra & Mahindra to international brands like Honda, Hyundai, Nissan, Toyota, Volkswagen, and Volvo. Among the different players, Maruti Suzuki leads the pack in terms of the range of vehicles with 14 sub-brands and 50 models, closely followed by Tata Motors with 12 models and 42 variants, and Hyundai with 7 models and 38 variants. The prices of different sub-brands and models of major players straddle a wide range, covering fine granules of price points. Tata Motors' Nano, priced at ₹152,000, and the Maruti 800, the quintessential entry-level model at ₹200,000, are the lowest listed-price models. The upper price band ranges from ₹12.2 million for one of the models of Audi to upward of ₹13.0 million for a model of BMW or Porsche, and even higher for super-luxury brands like Rolls-Royce or Maybach. The diversity of the price range and the number of models and variants available within a price band are evolving rapidly, catering to a diverse set of customers who vary in their economic status, utility drivers, and social aspirations. The exponential growth in market size, complexity, and competitive intensity has benefited consumers through superior product and service qualities and a wider range of alternatives to choose from. Companies, on the other hand, face challenges in differentiating their brands in an increasingly dense competitive space. Automobile brands now need to constantly update their models, introduce new features and versions, and ensure superior customer experience to ensure survival and growth.

This chapter examines the role competition plays and how marketers can best manage their brands depending on their market position and stage of the product life cycle. Competition grows more intense every year—from global competitors eager to grow sales in new markets, from online competitors seeking cost-efficient ways to expand distribution, from private-label and store brands providing low-price alternatives, and from brand extensions by mega-brands moving into new categories.² For these reasons and more, product and brand fortunes change over time, and marketers must respond accordingly.

Competitive Strategies for Market Leaders

Suppose a market is occupied by the firms shown in ▲ Figure 8.1. Forty percent is in the hands of a *market leader*; another 30 percent belongs to a *market challenger*; and 20 percent is claimed by a *market follower* willing to maintain its share and not rock the boat. *Market nichers*, serving small segments larger firms don't reach, hold the remaining 10 percent. A market leader has the largest

|Fig. 8.1| ▲

Hypothetical Market Structure

market share and usually leads in price changes, new-product introductions, distribution coverage, and promotional intensity.

Although marketers assume well-known brands are distinctive in consumers' minds, unless a dominant firm enjoys a legal monopoly, it must maintain constant vigilance. A powerful product innovation may come along; a competitor might find a fresh marketing angle or commit to a major marketing investment; or the leader's cost structure might spiral upward. One well-known brand and market leader that has worked to stay on top is Xerox.

Xerox Xerox has had to become more than just a copier company. Now the blue-chip icon with the name that became a verb sports the broadest array of imaging products in the world and dominates the market for high-end printing systems. And it's making a huge product line transition as it moves from the old light lens technology to digital systems. Xerox is preparing for a world in which most pages are printed in color (which, not incidentally, generates five times the revenue of black-and-white). Besides revamping its machines, Xerox is beefing up sales by providing annuity-like products and services that are ordered again and again: document management, ink, and toners. It has even introduced the managed print-services business to help companies actually eliminate desktop printers and let employees share multifunction devices that copy, print, and fax. Once slow to respond to the emergence of Canon and the small-copier market, Xerox is doing everything it can to stay ahead of the game.³

In many industries, a discount competitor has undercut the leader's prices. "Marketing Insight: When Your Competitor Delivers More for Less" describes how leaders can respond to an aggressive competitive price discounter.

When Your Competitor Delivers More for Less

Companies offering the powerful combination of low prices and high quality are capturing the hearts and wallets of consumers all over the world. In the United States, more than half the population now shops weekly at mass merchants such as Walmart and Target. In the United Kingdom, premium retailers such as Boots and Sainsbury are scrambling to meet intensifying price—and quality—competition from ASDA and Tesco.

In India, new-format retailers such as Big Bazaar and Star India Bazaar, low-cost airlines like IndiGo and SpiceJet, and online travel agents like MakeMyTrip and Cleartrip are transforming the way consumers transact and connect with brands in a variety of products and services. Traditional players are right to feel threatened. Upstart firms often rely on serving one or a few consumer segments, providing better delivery or just one additional benefit, and matching low prices with highly efficient operations to keep costs down. They have changed consumer expectations about the trade-off between quality and price.

To compete, mainstream companies need to infuse their timeless strategies like cost control and product differentiation with greater intensity and focus, and then execute them flawlessly. Differentiation, for example, becomes less about the abstract goal of rising above competitive clutter and more about identifying openings left by the value players' business models. Effective pricing means waging a transaction-by-transaction perception battle for consumers predisposed to believe value-oriented competitors are always cheaper.

Competitive outcomes will be determined, as always, on the ground—in product aisles, merchandising displays, reconfigured processes, and pricing stickers. Traditional players can't afford to drop a stitch. The new competitive environment places a new premium on—and adds new twists to—the old imperatives of differentiation and execution.

Differentiation

Marketers need to protect areas where their business models give other companies room to maneuver. Instead of trying to compete with Walmart and other value retailers on price, for example, Walgreens emphasizes convenience. It has expanded rapidly to make its stores ubiquitous, mostly on corners with easy parking, and overhauled store layouts to speed consumers in and out, placing key categories such as convenience foods and one-hour photo services near the front. To simplify prescription orders, the company has installed a telephone and online ordering system and drive-through windows at most freestanding stores. These steps helped it increase its revenue from \$15 billion in 1998 to over \$59 billion in 2008, making it the largest U.S. drugstore chain.

(continued)

Execution

Kmart's disastrous experience trying to compete head-on with Walmart on price highlights the difficulty of challenging value leaders on their own terms. To compete effectively, firms may instead need to downplay or even abandon some market segments. To compete with Ryanair and easyJet, British Airways has put more emphasis on its long-haul routes, where value-based players are not active, and less on the short-haul routes where they thrive.

Major airlines have also introduced their own low-cost carriers. But Continental's Lite, KLM's Buzz, SAS's Snowflake, and United's Shuttle have all been unsuccessful. One school of thought is that companies should set up low-cost operations only if: (1) their existing businesses

will become more competitive as a result and (2) the new business will derive some advantages it would not have gained if independent. Low-cost operations set up by HSBC, ING, Merrill Lynch, and Royal Bank of Scotland—First Direct, ING Direct, ML Direct, and Direct Line Insurance, respectively—succeed in part thanks to synergies between the old and new lines of business. The low-cost operation must be designed and launched as a moneymaker in its own right, not just as a defensive play.

George, and Laxman Narasimhan, "When Your Competitor Delivers More for Less," *McKinsey Quarterly* (Winter 2004): 48–59. See also Jan-Benedict E. M. Steenkamp and Nirmalya Kumar, "Don't Be Undersold," *Harvard Business Review*, December 2009, pp. 90–95.

To stay number one, the firm must first find ways to expand total market demand. Second, it must protect its current share through good defensive and offensive actions. Third, it should increase market share, even if market size remains constant. Let's look at each strategy.

Expanding Total Market Demand

When the total market expands, the dominant firm usually gains the most. If Heinz can convince more people to use ketchup, or to use ketchup with more meals, or to use more ketchup on each occasion, the firm will benefit considerably because it already sells almost two-thirds of the country's ketchup. In general, the market leader should look for new customers or more usage from existing customers.

NEW CUSTOMERS Every product class has the potential to attract buyers who are unaware of the product or are resisting it because of price or lack of certain features. As Chapter 2 suggested, a company can search for new users among three groups: those who might use it but do not (*market-penetration strategy*), those who have never used it (*new-market segment strategy*), or those who live elsewhere (*geographical-expansion strategy*).

Here is how Starbucks describes its multipronged approach to growth on its corporate Web site.⁴

Starbucks purchases and roasts high-quality whole bean coffees and sells them along with fresh, rich-brewed, Italian style espresso beverages, a variety of pastries and confections, and coffee-related accessories and equipment—primarily through its company-operated retail stores. In addition to sales through our company-operated retail stores, Starbucks sells whole bean coffees through a specialty sales group and supermarkets. Additionally, Starbucks produces and sells bottled Frappuccino® coffee drinks and a line of premium ice creams through its joint venture partnerships and offers a line of innovative premium teas produced by its wholly owned subsidiary, Tazo Tea Company. The Company's objective is to establish Starbucks as the most recognized and respected brand in the world.

MORE USAGE Marketers can try to increase the amount, level, or frequency of consumption. They can sometimes boost the *amount* through packaging or product redesign. Larger package sizes increase the amount of product consumers use at one time.⁵ Consumers use more of impulse products such as soft drinks and snacks when the product is made more available.

Increasing *frequency* of consumption, on the other hand, requires either (1) identifying additional opportunities to use the brand in the same basic way or (2) identifying completely new and different ways to use the brand.

Additional Opportunities to Use the Brand A marketing program can communicate the appropriateness and advantages of using the brand. Another opportunity arises when consumers' perceptions of their usage differs from reality. Consumers may fail to replace a short-lived product

when they should because they overestimate how long it stays fresh.⁶ One strategy is to tie the act of replacing the product to a holiday, event, or time of year. The repainting of houses coincides with Diwali, Pongal, or other festivals, so paint brands increase their advertisement and market stimulation efforts during the festive season. Another might be to provide consumers with better information about when they first used the product or need to replace it, or (2) the current level of product performance. Gillette razor cartridges feature colored stripes that slowly fade with repeated use, signaling the user to move on to the next cartridge.

New Ways to Use the Brand The second approach to increasing frequency of consumption is to identify completely new and different applications. Food product companies have long advertised recipes that use their branded products in different ways. Monaco biscuits, for example, have been advertised as the base for a variety of toppings to serve as starters before the main meal or as snacks for guests. Similarly, Nestlé has published recipes for ice creams, *kulfis*, cakes, *halwa*, and a variety of home-made sweets using Milkmaid—its brand of sweetened condensed milk.

Protecting Market Share

While trying to expand total market size, the dominant firm must actively defend its current business: Boeing against Airbus, and Google against Yahoo! and Microsoft.⁷ How can the leader do so? The most constructive response is *continuous innovation*. The front-runner should lead the industry in developing new products and customer services, distribution effectiveness, and cost cutting. Comprehensive solutions increase its competitive strength and value to customers.

PROACTIVE MARKETING In satisfying customer needs, we can draw a distinction between responsive marketing, anticipative marketing, and creative marketing. A *responsive* marketer finds a stated need and fills it. An *anticipative* marketer looks ahead to needs customers may have in the near future. A *creative* marketer discovers solutions customers did not ask for but to which they enthusiastically respond. Creative marketers are proactive *market-driving* firms, not just market-driven ones.⁸

Many companies assume their job is just to adapt to customer needs. They are reactive mostly because they are overly faithful to the customer-orientation paradigm and fall victim to the “tyranny of the served market.” Successful companies instead proactively shape the market to their own interests. Instead of trying to be the best player, they change the rules of the game.⁹

A company needs two proactive skills: (1) *responsive anticipation* to see the writing on the wall, as when IBM changed from a hardware producer to a service business and (2) *creative anticipation* to devise innovative solutions, as when PepsiCo introduced H2OH! (a soft drink–bottled water hybrid). Note that *responsive anticipation* is performed before a given change, while *reactive response* happens after the change takes place.

Proactive companies create new offers to serve unmet—and maybe even unknown—consumer needs. In the late 1970s, Akio Morita, the Sony founder, was working on a pet project that would revolutionize the way people listened to music: a portable cassette player he called the Walkman. Engineers at the company insisted there was little demand for such a product, but Morita refused to part with his vision. By the 20th anniversary of the Walkman, Sony had sold over 250 million in nearly 100 different models.¹⁰

Proactive companies may redesign relationships within an industry, like Toyota and its relationship to its suppliers. Or they may educate customers, as Body Shop does in stimulating the choice of environmental-friendly products.

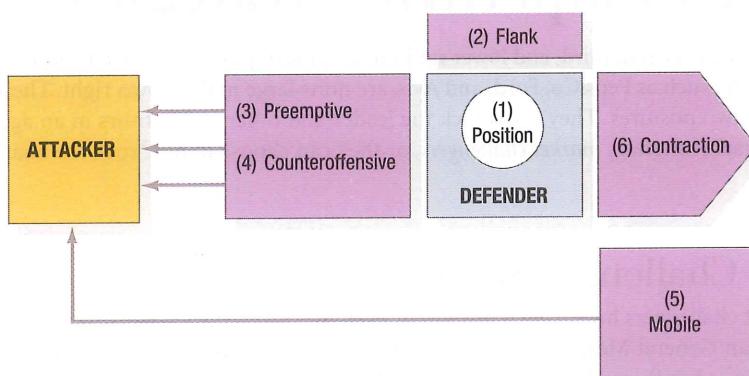

Companies need to practice “uncertainty management.” Proactive firms:

- Are ready to take risks and make mistakes,
- Have a vision of the future and of investing in it,
- Have the capabilities to innovate,
- Are flexible and nonbureaucratic, and
- Have many managers who think proactively.

Companies that are *too* risk-averse won’t be winners.

DEFENSIVE MARKETING Even when it does not launch offensives, the market leader must not leave any major flanks exposed. The aim of defensive strategy is to reduce the probability of attack, divert attacks to less-threatened areas, and lessen their intensity. Speed of response can make an important difference to profit. A dominant firm can use the six defense strategies summarized in ▲ Figure 8.2.¹¹

- **Position Defense.** Position defense means occupying the most desirable market space in consumers' minds, making the brand almost impregnable, as Procter & Gamble has done with Tide detergent for cleaning, Crest toothpaste for cavity prevention, and Pampers diapers for dryness.
- **Flank Defense.** The market leader should erect outposts to protect a weak front or support a possible counterattack. Procter & Gamble brands such as Gain and Cheer laundry detergent and Luvs diapers have played strategic offensive and defensive roles.
- **Preemptive Defense.** A more aggressive maneuver is to attack first, perhaps with guerrilla action across the market—hitting one competitor here, another there—and keeping everyone off balance. Another is to achieve broad market envelopment that signals competitors not to attack.¹² State Bank of India's focus on expanding their network in the vast rural hinterland of over 100,000 villages by setting up ATMs in these areas is an example of a large bank providing steep competition to small regional banks and large commercial banks that mostly focus on urban areas.¹³ Yet another preemptive defense is to introduce a stream of new products and announce them in advance.¹⁴ Such “preannouncements” can signal competitors that they will need to fight to gain market share.¹⁵ If Microsoft announces plans for a new-product development, smaller firms may choose to concentrate their development efforts in other directions to avoid head-to-head competition. Some high-tech firms have been accused of selling “vaporware”—announcing products that miss delivery dates or are never introduced.¹⁶
- **Counteroffensive Defense.** In a counteroffensive, the market leader can meet the attacker frontally and hit its flank, or launch a pincer movement so it will have to pull back to defend itself. After FedEx watched UPS successfully invade its airborne delivery system, it invested heavily in ground delivery through a series of acquisitions to challenge UPS on its home turf.¹⁷ Another common form of counteroffensive is the exercise of economic or political clout. The leader may try to crush a competitor by subsidizing lower prices for the vulnerable product with revenue from its more profitable products, or it may prematurely announce a product upgrade to prevent customers from buying the competitor's product. Or the leader may lobby legislators to take political action to inhibit the competition.
- **Mobile Defense.** In mobile defense, the leader stretches its domain over new territories through market broadening and market diversification. *Market broadening* shifts the company's focus from the current product to the underlying generic need. Thus, “petroleum” companies are seeking to recast themselves as “energy” companies. This change required them to research the oil, coal, nuclear, hydroelectric, and chemical industries. *Market diversification* shifts the company's focus into unrelated industries. Acknowledging

|Fig. 8.2| ▲
Six Types of Defense
Strategies

growing curbs on cigarette smoking, the tobacco giant ITC started focusing on fast-moving consumer products and food businesses.

- **Contraction Defense.** Sometimes large companies can no longer defend all their territory. In *planned contraction* (also called *strategic withdrawal*), they give up weaker markets and reassign resources to stronger ones. HUL's divestment from noncore businesses that do not offer synergy is an example in this regard.

Increasing Market Share

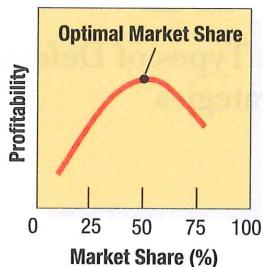

No wonder competition has turned fierce in so many markets: one share point can be worth tens of millions of dollars. Gaining increased share does not automatically produce higher profits, however—especially for labor-intensive service companies that may not experience many economies of scale. Much depends on the company's strategy.¹⁸

Because the cost of buying higher market share through acquisition may far exceed its revenue value, a company should consider four factors first:

- **The possibility of attracting legal action for violating the Competition Act or antitrust law.** Frustrated competitors are likely to cry "monopoly" and seek legal action if a dominant firm makes further inroads. Microsoft and Intel have had to fend off numerous lawsuits and legal challenges around the world as a result of what some feel are inappropriate or illegal business practices and abuse of market power.
- **Economic cost.** ▲ Figure 8.3 shows that profitability might fall with market share gains after some level. In the illustration, the firm's *optimal market share* is 50 percent. The cost of gaining further market share might exceed the value if holdout customers dislike the company, are loyal to competitors, have unique needs, or prefer dealing with smaller firms. And the costs of legal work, public relations, and lobbying rise with market share. Pushing for higher share is less justifiable when there are unattractive market segments, buyers who want multiple sources of supply, high exit barriers, and few scale or experience economies. Some market leaders have even increased profitability by selectively *decreasing* market share in weaker areas.¹⁹
- **The danger of pursuing the wrong marketing activities.** Companies successfully gaining share typically outperform competitors in three areas: new-product activity, relative product quality, and marketing expenditures.²⁰ Companies that attempt to increase market share by cutting prices more deeply than competitors typically don't achieve significant gains, because rivals meet the price cuts or offer other values so buyers don't switch.
- **The effect of increased market share on actual and perceived quality.**²¹ Too many customers can put a strain on the firm's resources, hurting product value and service delivery. Some mobile phone service providers attracted more subscribers than their service capacity could accommodate, leading to customer frustration and dissatisfaction.

Other Competitive Strategies

Firms that occupy second, third, and lower ranks in an industry are often called runner-up or trailing firms. Some, such as PepsiCo, Ford, and Avis, are quite large in their own right. These firms can adopt one of two postures. They can attack the leader and other competitors in an aggressive bid for further market share as *market challengers*, or they can choose to not "rock the boat" as *market followers*.

|Fig. 8.3| ▲

The Concept of Optimal Market Share

Market-Challenger Strategies

Many market challengers have gained ground or even overtaken the leader. Toyota today produces more cars than General Motors, Lowe's is putting pressure on Home Depot, and AMD has been chipping away at Intel's market share.²² A successful challenger brand in the fabric-care market in India is Ujala Supreme from Jyothy Laboratories.

Ujala

Jyothy Laboratories Limited, which started as a small player in the fabric-care market in India, pioneered the liquid fabric-whitener category with its flagship brand Ujala Supreme. Ujala challenged the leading brand Robin Blue, which was then available only in powder form. The tagline of the brand advertisement "Have You Changed Over to Ujala?" nudged consumers to change from powder to liquid fabric whiteners. The unique shape of the bottle became the signature style, making the brand visible in shop shelves, and the competitive price induced consumer trials and acceptance. As the brand became popular, the company introduced other fabric-care products under the Ujala brand name. These include Ujala Stiff & Shine, a post-wash fabric-care product to keep clothes crisp, Ujala Washing Powder, and Ujala Techno Bright detergent. The company has come a long way since the launch of Ujala to become a multi-product and multi-brand company. Jyothy Laboratories has now acquired Henkel India Limited that has brands such as Fa, Margo, Pril, Mr. White, and Chek in its portfolio.

Challengers set high aspirations while market leaders can fall prey to running business as usual. Now let's examine the competitive attack strategies available to challengers.²³

DEFINING THE STRATEGIC OBJECTIVE AND OPPONENT(S) A market challenger must first define its strategic objective, usually to increase market share. The challenger must decide whom to attack:

- ***It can attack the market leader.*** This is a high-risk but potentially high-payoff strategy and makes good sense if the leader is not serving the market well. Xerox wrested the copy market from 3M by developing a better copying process. Later, Canon grabbed a large chunk of Xerox's market by introducing desk copiers. This strategy often has the added benefit of distancing the firm from other challengers.
- ***It can attack firms its own size that are not doing the job and are underfinanced.*** These firms have aging products, are charging excessive prices, or are not satisfying customers in other ways.
- ***It can attack small local and regional firms.*** Several major banks grew to their present size by gobbling up smaller regional banks, or "guppies."

CHOOSING A GENERAL ATTACK STRATEGY Given clear opponents and objectives, what attack options are available? We can distinguish five: frontal, flank, encirclement, bypass, and guerilla attacks.

- ***Frontal Attack.*** In a pure *frontal attack*, the attacker matches its opponent's product, advertising, price, and distribution. The principle of force says the side with the greater resources will win. A modified frontal attack, such as cutting price, can work if the market leader doesn't retaliate, and if the competitor convinces the market its product is equal to the leader's. Helene Curtis is a master at convincing the market that its brands—such as Suave and Finesse—are equal in quality but a better value than higher-priced brands.
- ***Flank Attack.*** A *flanking* strategy is another name for identifying shifts that are causing gaps to develop, then rushing to fill the gaps. Flanking is particularly attractive to a challenger with fewer resources and can be more likely to succeed than frontal attacks. In a geographic attack, the challenger spots areas where the opponent is underperforming.
- ***Encirclement Attack.*** *Encirclement* attempts to capture a wide slice of territory by launching a grand offensive on several fronts. It makes sense when the challenger commands superior resources. In making a stand against archrival Microsoft, Sun Microsystems licensed its Java software to hundreds of companies and thousands of software developers for all sorts of consumer devices. As consumer electronics products began to go digital, Java started appearing in a wide range of gadgets.
- ***Bypass Attack.*** *Bypassing* the enemy altogether to attack easier markets instead offers three lines of approach: diversifying into unrelated products, diversifying into new geographical markets, and leapfrogging into new technologies. Pepsi has used a bypass strategy against Coke

Ujala, the fabric whitener from Jyothy Laboratories, successfully challenged Robin Blue, the market leader at that point, by introducing fabric whiteners in a new liquid form.

by (1) rolling out Aquafina bottled water nationally in 1997 before Coke launched its Dasani brand; (2) purchasing orange juice giant Tropicana in 1998, when it owned almost twice the market share of Coca-Cola's Minute Maid; and (3) purchasing the Quaker Oats Company, owner of market leader Gatorade sports drink, for \$14 billion in 2000.²⁴ In *technological leapfrogging*, the challenger patiently researches and develops the next technology, shifting the battleground to its own territory where it has an advantage. Google used technological leapfrogging to overtake Yahoo! and become the market leader in search.

- **Guerrilla Attacks.** Guerrilla attacks consist of small, intermittent attacks, conventional and unconventional, including selective price cuts, intense promotional blitzes, and occasional legal action, to harass the opponent and eventually secure permanent footholds. A guerrilla campaign can be expensive, although less so than a frontal, encirclement, or flank attack, but it typically must be backed by a stronger attack to beat the opponent.

The wide geographical spread of the market and variations in tastes, preferences, and habits in South Asia have encouraged the growth of regional brands in a wide range of product categories. Reputed international brands face stiff competition from *regional champions* who understand the local and regional tastes, customs, and preferences well. These firms also tend to be entrepreneurial in their strategic and tactical initiatives and quick in decision making. Some of these brands dominate the geographical markets in their respective categories and some have grown to become well-known national and transnational brands.

In the hair care, skin care, and personal care product categories, CavinKare, the South India-based group, has many strong regional brands. Its Chik brand of shampoo is a category creator in the low-unit-price sachet shampoo market in India. Nyle herbal shampoo and Meera hair-wash powder, which offer traditional treatment for healthy hair, are some of the other CavinKare brands with a strong regional presence. Wipro's Santoor soap started as a regional brand, leveraging the popularity of sandalwood paste as a traditional skincare method. This brand is now one of the biggest brands in the bathing soap category in India. Paras Pharmaceuticals, which began as a regional player, has an array of brands such as Moov, Krack, Itchguard, Borosoft, D'Cold, Stopache, and others that dominate their respective categories. Some other well-known brands from domestic majors who started as small regional players include Emami's Fair and Handsome (fairness cream), Dabur's Vatika and Amla (hair care) brands and Odonil (room freshener), and Marico's Parachute coconut oil (hair care) and Saffola (cooking oil). Wagh Bakri is yet another brand that rules the packaged tea market in the western region in India.

Wagh Bakri Tea Wagh Bakri, which started its journey in 1892 with a small shop in Ahmedabad selling tea in loose form, is one of the largest procurers and marketers of tea in India today. This brand dominates the packaged tea market in Gujarat and is a significant player in western India. One of the important reasons for the popularity of the brand is the quality of the blend. The brand provides a *kadak-meethi* (strong and sweet) flavor that its loyal customers prefer. Due to its deep market penetration, the brand enjoys prominent retail presence not only in traditional provision shops, but also in "modern trade" or supermarkets. A tightly managed distribution channel with pre-fixed days and time for order-taking and product delivery to retail points ensures efficiency and shelf presence of the brand. The company's product and brand portfolio consists of an array of product forms and brands. Under the brand Wagh Bakri, there are different product forms such as leaf and dust tea, and a variety of tea bags with ginger, *elaichi* (cardamom), and masala flavors. Another brand from the company, Good Morning, has different varieties such as green tea, Assam tea, Darjeeling tea, and "English Breakfast" tea. Pure Darjeeling tea is marketed in small wooden boxes under the brand D'ling. The company has another brand, Mili, aimed at encouraging consumers who buy loose tea to convert to packaged-tea buyers. The portfolio also includes a variety of certified organic teas. A comprehensive portfolio of brands and product forms, varieties, and flavors provide significant competitive advantages. With a strong base in the home territory, Wagh Bakri is now expanding its presence to other states in India. The tagline in advertisements reflect the name and the logo—*wagh* (tiger) and *bakri* (goat) drinking tea from the same cup!

WAGH BAKRI®
Tea

**The taste that brings
people together world-wide.**

Each sip of Wagh Bakri tea offers refreshing taste along with great colour and mesmerising aroma which bring people closer over a cup of our tea.

No wonder Wagh Bakri tea, a product of India's largest privately held tea company, is loved by people in over 25 countries.

So where is your cup of Wagh Bakri tea?

**For more information
call: 9560191252**

Hamesha Rishtey Banaye

A comprehensive portfolio of brands, product variants, and flavors provides significant competitive advantages to Wagh Bakri, one of the largest procurers and marketers of tea in India today. Starting with a strong base in western India, Wagh Bakri is now expanding its presence to other states in the country.

CHOOSING A SPECIFIC ATTACK STRATEGY Any aspect of the marketing program can serve as the basis for attack, such as lower-priced or discounted products, new or improved products and services, a wider variety of offerings, and innovative distribution strategies. A challenger's success depends on combining several, more specific, strategies to improve its position over time.

Market-Follower Strategies

Theodore Levitt argues that a strategy of *product imitation* might be as profitable as a strategy of *product innovation*.²⁵ In “innovative imitation,” as he calls it, the innovator bears the expense of developing the new product, getting it into distribution, and informing and educating the market. The reward for all this work and risk is normally market leadership. However, another firm can come along and copy or improve on the new product. Although it probably will not overtake the leader, the follower can achieve high profits because it did not bear any of the innovation expense. Market-follower strategies may also be used for creating an image for a product.

Naming Deodorants and Fragrance Brands Some market followers in the deodorant market use suggestive and, sometimes, provocative names to get consumer attention in India. As the market is estimated to be growing at a rapid rate,²⁶ a variety of brands and fragrances are vying for consumer attention. Hindustan Unilever's Axe caught the attention and interest of consumers through advertisements that depicted the heightened attractiveness of men who used Axe, calling it the “Axe Effect.” Although these advertisements generated some controversies,²⁷ the success of the brand encouraged many others to enter the market with a range of

fragrances with interesting and suggestive names. Paras Pharmaceutical's Set Wet brand of deodorants uses names such as Casanova, Macho, Sexy, Haute, Cool, Amoralist, and so on for different fragrances, and L'Oréal's Garnier Mineral Deodorant range uses properties related to functionality in the names of its fragrances, such as Absolute Cool and Extreme Dry. The names Free Spirit, Confidence, Classic Silk, and Musk are used by Rexona. Reebok, the well-known sports accessory brand, has a fragrance range for men as well as women. Called Replay, Reegame, Reebounce, and so on, these names clearly convey the sporty and rejuvenating character of the fragrances. Godrej Cinthol, Park Avenue, Adidas, Nivea, Nike, and Santoor are some of the other brands with a variety of fragrances with interesting names. While some brands have fragrances that target men, some target women and others are androgynous, making the deodorant market in India intensely competitive.

Patterns of “conscious parallelism” are common in capital-intensive, homogeneous-product industries such as steel, fertilizers, and chemicals. The opportunities for product differentiation and image differentiation are low, service quality is comparable, and price sensitivity runs high. The mood in these industries is against short-run grabs for market share, because that only provokes retaliation. Instead, most firms present similar offers to buyers, usually by copying the leader. Market shares show high stability.

That's not to say market followers lack strategies. They must know how to hold current customers and win a fair share of new ones. Each follower tries to bring distinctive advantages to its target market—location, services, financing—while defensively keeping its manufacturing costs low and its product quality and services high. It must also enter new markets as they open up. The follower must define a growth path, but one that doesn't invite competitive retaliation. We distinguish four broad strategies:

1. **Counterfeiter**—The counterfeiter duplicates the leader's product and packages and sells it on the black market or through disreputable dealers. Music firms, Apple, and Rolex have been plagued by the counterfeiter problem, especially in Asia.
2. **Cloner**—The cloner emulates the leader's products, name, and packaging, with slight variations. For example, Ralcorp Holdings sells imitations of name-brand cereals in look-alike boxes. Its Tasteeos, Fruit Rings, and Corn Flakes sell for nearly \$1 a box less than the leading name brands; the company's sales were up 28 percent in 2008.
3. **Imitator**—The imitator copies some things from the leader but differentiates on packaging, advertising, pricing, or location. The leader doesn't mind as long as the imitator doesn't attack aggressively. Fernandez Pujals grew up in Fort Lauderdale, Florida, and took Domino's home delivery idea to Spain, where he borrowed \$80,000 to open his first store in Madrid. His Telepizza chain now operates almost 1,050 stores in Europe and Latin America.
4. **Adapter**—The adapter takes the leader's products and adapts or improves them. The adapter may choose to sell to different markets, but often it grows into a future challenger, as many Japanese firms have done after improving products developed elsewhere.

“Marketing Insight: Competition in Rural Markets—Fake or Real?” discusses the problem of fake brands in rural markets in India.

What does a follower earn? Normally, less than the leader. A study of food-processing companies showed the largest averaging a 16 percent return on investment, the number two firm, 6 percent, the number three firm, -1 percent, and the number four firm, -6 percent. No wonder Jack Welch, former CEO of GE, told his business units that each must reach the number one or two position in its market or else! Followership is often not a rewarding path.

Market-Nicher Strategies

An alternative to being a follower in a large market is to be a leader in a small market, or niche, as we introduced in Chapter 7. Smaller firms normally avoid competing with larger firms by targeting small markets of little or no interest to the larger firms. But even large, profitable firms may choose to use niching strategies for some of their business units or companies.

Firms with low shares of the total market can become highly profitable through smart niching. Such companies tend to offer high value, charge a premium price, achieve lower manufacturing costs, and shape a strong corporate culture and vision. Garments with ethnic designs and motifs are niche products in export markets. Many commercial banks have exclusive branches for high net-worth customers or separate privilege customer lounges for important customers.

Competition in Rural Markets—Fake or Real?

A significant difference between the rural and urban markets in Asia is the level and intensity of market competition. In rural India, distribution and product availability tend to be the more significant issues as the competition among brands is limited. There are different reasons for the lower intensity of competition in rural markets. Strategic priorities of organizations, capability and resource constraints to operate in rural markets, and inadequacy in consumer insights of rural consumers are some of these. Brands that have made their presence felt in rural markets face competition from imitation or fake brands in rural areas. Fake products have lured gullible farmers since a long time. There have been incidents of fake agricultural inputs such as fertilizers in Bangladesh and Bio Technology (or BT) cotton seeds in Pakistan. However, it is the fast-moving consumer goods sector that bears the brunt of fake products and brands. One estimate suggests that in India, counterfeit and pass-offs or fake products account for about ₹5,000 crore in the FMCG sector. In addition to the loss suffered by the industry due to fake products and counterfeit goods, the government too loses money due to tax evasions.

Because of the low literacy and education levels in villages, rural customers mostly identify products by the logo and the color scheme of the packs, and this explains the higher preponderance of the problem of fake brands in rural areas. In fact, a report suggests that in some of the traditional village *haats*, in the absence of original branded fast-moving consumer goods, fake or imitation products occupied the whole of the competitive vacuum. For example, there were over a hundred variants of Parachute hair oil and Fair and Lovely fairness cream. There are different types of imitation products in rural markets.

- **Look-alikes.** One type is the look-alike brands. These are products that are more like clones and they adopt a brand name, color scheme, and packaging that resemble the popular brand.
- **Spell-alikes.** The second type are the spell-alike brands, which are fakes of popular brands with misspelt brand names of the original brands. These products maintain a close resemblance to the color scheme, design, and packaging of the original brand. For example, Pentane, a spell-alike of Pantene, is found in the markets.

- **Duplicates.** The third category is duplicate brands which are exact copies of the popular brands, including the color schemes of the product and the packaging.

Fake products not only cannibalize the existing brands of genuine producers but also result in loss of future market share as the poor quality of such products erodes consumers' faith in the original brand. The problems of fake products and brands can be tackled in different ways. One method is to strengthen the distribution network. An important reason for fake brands to flourish is the demand-creating activities by the genuine brand owners through mass media advertisements. An absence of distribution reach encourages the fake or imitation brands to fill the demand void. Sometimes, due to higher margins of profit that the fake brands tend to provide, wholesalers and retailers are encouraged to distribute them. Companies, therefore, need to not only penetrate rural markets by establishing distribution systems, but also plug the weak links by initiating appropriate action against dubious traders.

Another way to tackle this problem is to make the packaging tamper-proof with more sophisticated and capital-intensive methods. For example, when Dabur faced the problem of loss of sales of its *Lal Dant Manjan* due to fake products, it introduced blow-molded containers. Additionally, measures like introducing holograms might also help in the fight against fakes. But such measures need to be supplemented with efforts to educate consumers on how to distinguish between fake brands and original brands. Companies can undertake consumer sensitization programs by, say, organizing consumer contests in *haats* and larger villages that require people to distinguish the original products from the counterfeits.

Companies need to develop rural intelligence by educating their sales staff to be on the lookout for the presence of fake and imitation brands. Coke has followed a similar model and has put up a network of consumer response coordinators across the country to redress various consumer complaints directly, including spurious bottling. Proctor & Gamble has been actively pursuing legal battles to stem the flow of counterfeiters and clones. At the industry level, the Federation of Indian Chambers of Commerce and Industry (FICCI) has formed a brand protection committee to tackle this problem. This committee, with a representation of manufacturers, legal experts, research agencies, consumer associations, government organizations, and trade representatives, has come together to tackle the problem of counterfeit and fake brands.

marketing Memo

Niche Specialist Roles

The key idea in successful nichemanship is specialization. Here are some possible niche roles:

- *End-user specialist.* The firm specializes in one type of end-use customer. For example, a *value-added reseller (VAR)* customizes computer hardware and software for specific customer segments and earns a price premium in the process.
- *Vertical-level specialist.* The firm specializes at some vertical level of the production-distribution value chain. A copper firm may concentrate on producing raw copper, copper components, or finished copper products.
- *Customer-size specialist.* The firm concentrates on either small, medium-sized, or large customers. Many nichers serve small customers neglected by the majors.
- *Specific-customer specialist.* The firm limits its selling to one or a few customers. Many firms sell their entire output to a single company, such as Walmart or General Motors.
- *Geographic specialist.* The firm sells only in a certain locality, region, or area of the world.

- *Product or product line specialist.* The firm carries or produces only one product line or product. A manufacturer may produce only lenses for microscopes. A retailer may carry only ties.
- *Product-feature specialist.* The firm specializes in producing a certain type of product or product feature. Zipcar's car-sharing services target people who live and work in seven major U.S. cities, frequently use public transportation, but still need a car a few times a month.
- *Job-shop specialist.* The firm customizes its products for individual customers.
- *Quality-price specialist.* The firm operates at the low- or high-quality ends of the market. Sharp AQUOS specializes in the high-quality, high-price LCD television and component screen market.
- *Service specialist.* The firm offers one or more services not available from other firms. A bank might take loan requests over the phone and hand-deliver the money to the customer.
- *Channel specialist.* The firm specializes in serving only one channel of distribution. For example, a soft drink company makes a very large-sized serving available only at gas stations.

Return on investment for businesses in smaller markets exceeds that in larger markets on average.²⁸ Why is niching so profitable? The market nicher knows the target customers so well, it meets their needs better than other firms selling to them casually. As a result, the nicher can charge a substantial price over costs. The nicher achieves *high margin*, whereas the mass marketer achieves *high volume*.

Nichers have three tasks: creating niches, expanding niches, and protecting niches. The risk is that the niche might dry up or be attacked. The company is then stuck with highly specialized resources that may not have high-value alternative uses.

Because niches can weaken, the firm must continually create new ones. "Marketing Memo: Niche Specialist Roles" outlines some options. The firm should "stick to its niching" but not necessarily to its niche. That is why *multiple niching* can be preferable to *single niching*. With strength in two or more niches, the company increases its chances for survival.

Firms entering a market should initially aim at a niche rather than the whole market. The cell phone industry has experienced phenomenal growth but is now facing fierce competition as the number of new potential users dwindles.

Product Life-Cycle Marketing Strategies

A company's positioning and differentiation strategy must change as the product, market, and competitors change over the *product life cycle (PLC)*. To say a product has a life cycle is to assert four things:

1. Products have a limited life.
2. Product sales pass through distinct stages, each posing different challenges, opportunities, and problems to the seller.

3. Profits rise and fall at different stages of the product life cycle.
4. Products require different marketing, financial, manufacturing, purchasing, and human resource strategies in each life-cycle stage.

Product Life Cycles

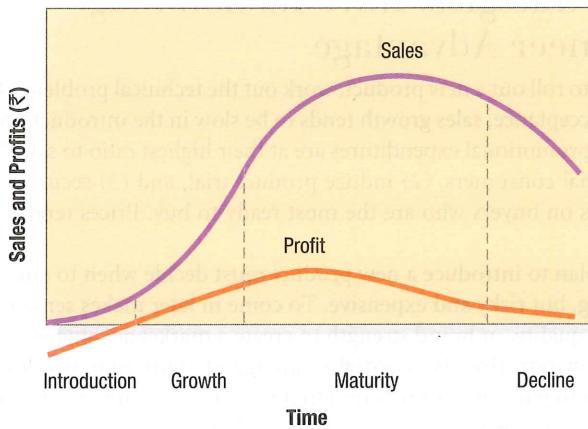

Most product life-cycle curves are portrayed as bell-shaped (see △ Figure 8.4). This curve is typically divided into four stages: introduction, growth, maturity, and decline.²⁹

1. **Introduction**—A period of slow sales growth as the product is introduced in the market. Profits are nonexistent because of the heavy expenses of product introduction.
2. **Growth**—A period of rapid market acceptance and substantial profit improvement.
3. **Maturity**—A slowdown in sales growth because the product has achieved acceptance by most potential buyers. Profits stabilize or decline because of increased competition.
4. **Decline**—Sales show a downward drift and profits erode.

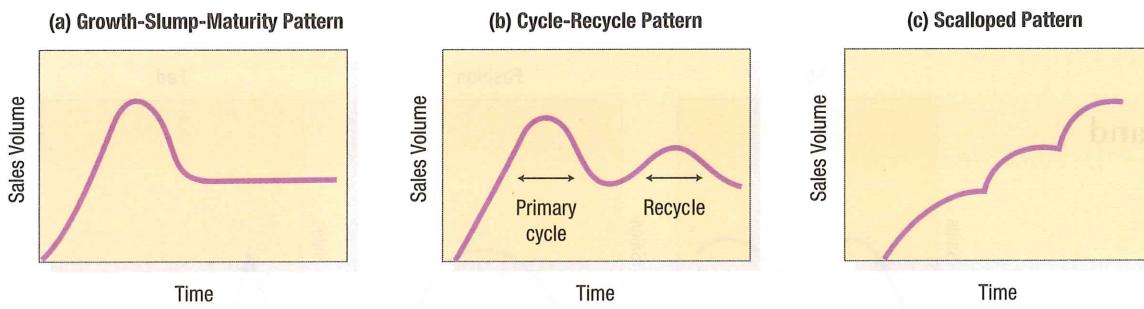

We can use the PLC concept to analyze a product category (hair care), a product form (hair oil), a product (coconut hair oil), or a brand (Parachute). Not all products exhibit a bell-shaped PLC.³⁰ Three common alternate patterns are shown in △ Figure 8.5.

Figure 8.5(a) shows a *growth-slump-maturity pattern*, characteristic of small kitchen appliances, for example, such as handheld mixers and bread makers. Sales grow rapidly when the product is first introduced and then fall to a “petrified” level sustained by late adopters buying the product for the first time and early adopters replacing it.

The *cycle-recycle pattern* in Figure 8.5(b) often describes the sales of new drugs. The pharmaceutical company aggressively promotes its new drug, producing the first cycle. Later, sales start declining, and another promotion push produces a second cycle (usually of smaller magnitude and duration).³¹

|Fig. 8.4| △
Sales and Profit Life Cycles

|Fig. 8.5| △

Common Product Life-Cycle Patterns

Another common pattern is the *scalloped PLC* in Figure 8.5(c). Here, sales pass through a succession of life cycles based on the discovery of new-product characteristics, uses, or users. Sales of nylon have shown a scalloped pattern because of the many new uses—parachutes, hosiery, shirts, carpeting, boat sails, automobile tires—discovered over time.³²

Style, Fashion, and Fad Life Cycles

We need to distinguish three special categories of product life cycles—styles, fashions, and fads (Figure 8.6). A *style* is a basic and distinctive mode of expression appearing in a field of human endeavor. Styles appear in homes (colonial, ranch, Cape Cod), clothing (formal, business casual, sporty), and art (realistic, surrealistic, abstract). A style can last for generations and go in and out of vogue. A *fashion* is a currently accepted or popular style in a given field. Fashions pass through four stages: distinctiveness, emulation, mass fashion, and decline.³³

The length of a fashion cycle is hard to predict. One view is that fashions end because they represent a purchase compromise, and consumers soon start looking for the missing attributes.³⁴ For example, as automobiles become smaller, they become less comfortable, and then a growing number of buyers start wanting larger cars. Another explanation is that too many consumers adopt the fashion, thus turning others away. Still another is that the length of a particular fashion cycle depends on the extent to which the fashion meets a genuine need, is consistent with other trends in the society, satisfies societal norms and values, and keeps within technological limits as it develops.³⁵

Fads are fashions that come quickly into public view, are adopted with great zeal, peak early, and decline very fast. Their acceptance cycle is short, and they tend to attract only a limited following who are searching for excitement or want to distinguish themselves from others. Fads fail to survive because they don't normally satisfy a strong need. The marketing winners are those who recognize fads early and leverage them into products with staying power.

Marketing Strategies: Introduction Stage and the Pioneer Advantage

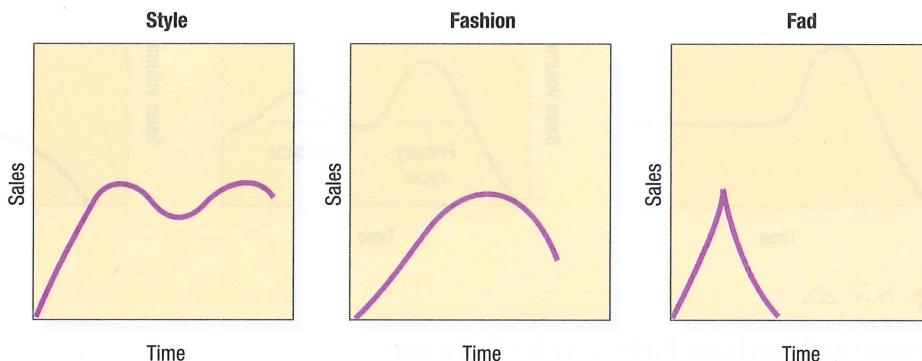

Because it takes time to roll out a new product, work out the technical problems, fill dealer pipelines, and gain consumer acceptance, sales growth tends to be slow in the introduction stage.³⁶ Profits are negative or low, and promotional expenditures are at their highest ratio to sales because of the need to (1) inform potential consumers, (2) induce product trial, and (3) secure distribution in retail outlets.³⁷ Firms focus on buyers who are the most ready to buy. Prices tend to be higher because costs are high.

Companies that plan to introduce a new product must decide when to enter the market. To be first can be rewarding, but risky and expensive. To come in later makes sense if the firm can bring superior technology, quality, or brand strength to create a market advantage.

Speeding up innovation time is essential in an age of shortening product life cycles. Being early has been shown to pay. One study found that products coming out six months late—but on budget—earned an average of 33 percent less profit in their first five years; products that came out on time but 50 percent over budget cut their profits by only 4 percent.³⁸

[Fig. 8.6] ▲

Style, Fashion, and Fad Life Cycles

Most studies indicate the market pioneer gains the greatest advantage.³⁹ Campbell, Coca-Cola, Hallmark, and Amazon.com developed sustained market dominance. Nineteen of twenty-five market leaders in 1923 were still the market leaders in 1983, 60 years later.⁴⁰ In a sample of industrial-goods businesses, 66 percent of pioneers survived at least 10 years, versus 48 percent of early followers.⁴¹

What are the sources of the pioneer's advantage?⁴² Early users will recall the pioneer's brand name if the product satisfies them. The pioneer's brand also establishes the attributes the product class should possess.⁴³ It normally aims at the middle of the market and so captures more users. Customer inertia also plays a role; and there are producer advantages: economies of scale, technological leadership, patents, ownership of scarce assets, and other barriers to entry. Pioneers can spend marketing dollars more effectively and enjoy higher rates of repeat purchases. An alert pioneer can lead indefinitely by pursuing various strategies.⁴⁴

But the advantage is not inevitable.⁴⁵ Bowmar (hand calculators), Apple's Newton (personal digital assistant), Netscape (Web browser), Reynolds (ballpoint pens), and Osborne (portable computers) were market pioneers overtaken by later entrants. First movers also have to watch out for the "second-mover advantage."

Steven Schnaars studied 28 industries where imitators surpassed the innovators.⁴⁶ He found several weaknesses among the failing pioneers, including new products that were too crude, were improperly positioned, or appeared before there was strong demand; product-development costs that exhausted the innovator's resources; a lack of resources to compete against entering larger firms; and managerial incompetence or unhealthy complacency. Successful imitators thrived by offering lower prices, improving the product more continuously, or using brute market power to overtake the pioneer. None of the companies that now dominate in the manufacture of personal computers—including Dell, HP, and Acer—were first movers.⁴⁷

Peter Golder and Gerald Tellis raise further doubts about the pioneer advantage.⁴⁸ They distinguish between an *inventor*, first to develop patents in a new-product category, a *product pioneer*, first to develop a working model, and a *market pioneer*, first to sell in the new-product category. They also include nonsurviving pioneers in their sample. They conclude that although pioneers may still have an advantage, a larger number of market pioneers fail than has been reported, and a larger number of early market leaders (though not pioneers) succeed. Later entrants overtaking market pioneers include IBM over Sperry in mainframe computers, Matsushita over Sony in VCRs, and GE over EMI in CAT scan equipment.

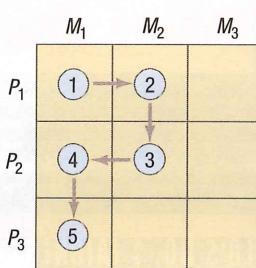

Tellis and Golder more recently identified five factors underpinning long-term market leadership: vision of a mass market, persistence, relentless innovation, financial commitment, and asset leverage.⁴⁹ Other research has highlighted the importance of the novelty of the product innovation.⁵⁰ When a pioneer starts a market with a really new product, like the Segway Human Transporter, surviving can be very challenging. In the case of incremental innovation, like MP3 players with video capabilities, survival rates are much higher.

The pioneer should visualize the product markets it could enter, knowing it cannot enter all of them at once. Suppose market-segmentation analysis reveals the product market segments shown in △ Figure 8.7. The pioneer should analyze the profit potential of each product market singly and in combination and decide on a market expansion path. Thus, the pioneer in Figure 8.7 plans first to enter product market P_1M_1 , then move the product into a second market (P_1M_2), then surprise the competition by developing a second product for the second market (P_2M_2), then take the second product back into the first market (P_2M_1), then launch a third product for the first market (P_3M_1). If this game plan works, the pioneer firm will own a good part of the first two segments and serve them with two or three products.

Marketing Strategies: Growth Stage

The growth stage is marked by a rapid climb in sales. Early adopters like the product and additional consumers start buying it. New competitors enter, attracted by the opportunities. They introduce new product features and expand distribution.

Prices stabilize or fall slightly, depending on how fast demand increases. Companies maintain promotional expenditures or raise them slightly, to meet competition and continue to educate the market. Sales rise much faster than promotional expenditures, causing a welcome decline in the promotion-sales ratio. Profits increase as promotion costs are spread over a larger volume, and unit manufacturing costs fall faster than price declines, owing to the producer-learning effect. Firms must watch for a change to a decelerating rate of growth in order to prepare new strategies.

|Fig. 8.7| △

Long-Range Product Market Expansion Strategy (P_i = product i; M_j = market j)

To sustain rapid market share growth now, the firm:

- improves product quality and adds new features and improved styling.
- adds new models and flanker products (of different sizes, flavors, and so forth) to protect the main product.
- enters new market segments.
- increases its distribution coverage and enters new distribution channels.
- shifts from awareness and trial communications to preference and loyalty communications.
- lowers prices to attract the next layer of price-sensitive buyers.

By spending money on product improvement, promotion, and distribution, the firm can capture a dominant position. It trades off maximum current profit for high market share and the hope of even greater profits in the next stage.

Men's fairness creams such as Fair and Handsome use well-known film and cricket stars and offer entertainment, information, and advice in a bid to capture customer attention in a market that is getting increasingly crowded.

"Use Fair and Handsome like me."

Fair and Handsome contains revolutionary American Lumino Peptide, which is one of World's Best Fairness ingredients. It makes new improved formula of Fair and Handsome even more effective on tough male skin. With better micro-distribution in male collagen structure, the new formula penetrates deep into tough male skin and regulates melanin that results in faster glowing fairness in just 3 weeks.*

WORLD'S NO. 1 FAIRNESS CREAM FOR MEN

Competing for Men's Fairness

The men's personal grooming market in India, especially the men's fairness cream category, is on the upswing. According to an estimate, the total fairness cream market is valued at around ₹22 billion, of which the men's skin fairness market accounts for only about ₹1.86 billion.⁵¹ Several brands have entered this segment, making the market highly competitive. Emami's Fair and Handsome, the first entrant in this market, aims at converting users of women's fairness cream through advertisements that say: "Hey, do you apply lipstick? Then why use women's fairness creams?" HUL quickly followed suit and launched Fair & Lovely Menz Active, leveraging the strength of the mother brand. In order to strengthen its presence further, HUL launched a new product in the category "Vaseline Men Antispot Whitening Face Cream." Nivea, reacting to competition, launched two products as part of its Nivea for Men range, namely, Whitening Moisturizer and Multi-White Whitening Facial Foam. Soon after, Garnier launched its Men's PowerLight range with the brand claim of using natural ingredients in two variants, namely, "fairness moisturizer and face wash" and "oil-control fairness moisturizer."⁵² Clarins positioned its product "Fatigue Fighter" as a skin refresher that rejuvenates skin and eliminates signs of stress and fatigue. Godrej FairGlow cream, yet another brand in the category, is available in low-unit-price range. CavinKare's Fairever's brand claim is that it acts as a sunscreen as well as an anti-marks cream supported by single-dose and low-unit-price packs. Elder Pharma's FairOne Man claims to be a fully herbal product with no side effects and is priced at a competitively lower rate. Zydus Cadila's EverYouth brand offers scrub, face wash, sun block, and moisturizer. Many of these brands use well-known film and cricket stars as brand endorsers. They promote their brands through micro Web sites and social networking sites, offering entertainment, information, and advice. As the number of brands increases, with each one offering specific value propositions, the market is becoming crowded and the options for alternative positioning strategies are becoming limited.

Marketing Strategies: Maturity Stage

At some point, the rate of sales growth will slow, and the product will enter a stage of relative maturity. Most products are in this stage of the life cycle, which normally lasts longer than the preceding ones.

The maturity stage divides into three phases: growth, stable, and decaying maturity. In the first, sales growth starts to slow. There are no new distribution channels to fill. New competitive forces emerge. In the second phase, sales per capita flatten because of market saturation. Most potential consumers have tried the product, and future sales depend on population growth and replacement demand. In the third phase, decaying maturity, the absolute level of sales starts to decline, and customers begin switching to other products.

This third phase poses the most challenges. The sales slowdown creates overcapacity in the industry, which intensifies competition. Weaker competitors withdraw. A few giants dominate—perhaps a quality leader, a service leader, and a cost leader—and profit mainly through high volume

and lower costs. Surrounding them is a multitude of market nichers, including market specialists, product specialists, and customizing firms.

The question is whether to struggle to become one of the big three and achieve profits through high volume and low cost, or pursue a niching strategy and profit through low volume and high margins. Sometimes the market will divide into low- and high-end segments, and market shares of firms in the middle steadily erode. Here's how Swedish appliance manufacturer, Electrolux, has coped with this situation.

Electrolux AB In 2002, Electrolux faced a rapidly polarizing appliance market. Low-cost Asian companies such as Haier, LG, and Samsung were applying downward price pressure, while premium competitors like Bosch, Sub-Zero, and Viking were growing at the expense of the middle-of-the-road brands. Electrolux's new CEO Hans Stråberg decided to escape the middle by rethinking Electrolux customers' wants and needs. He segmented the market according to the lifestyle and purchasing patterns of about 20 different types of consumers. Electrolux now successfully markets its steam ovens to health-oriented consumers, for example, and its compact dishwashers, originally for smaller kitchens, to a broader consumer segment that washes dishes more often. To companies stuck in the middle of a mature market, Stråberg offers this advice: "Start with consumers and understand what their latent needs are and what problems they experience . . . then put the puzzle together yourself to discover what people really want to have. Henry Ford is supposed to have said, 'If I had asked people what they really wanted, I would have made faster horses' or something like that. You need to figure out what people really want, although they can't express it."⁵³

Some companies abandon weaker products to concentrate on new and more profitable ones. Yet they may be ignoring the high potential many mature markets and old products still have. Industries widely thought to be mature—autos, motorcycles, television, watches, cameras—were proved otherwise by the Japanese, who found ways to offer customers new value. Three ways to change the course for a brand are market, product, and marketing program modifications.

MARKET MODIFICATION A company might try to expand the market for its mature brand by working with the two factors that make up sales volume: Volume = number of brand users × usage rate per user, as in Table 8.1, but may also be matched by competitors.

PRODUCT MODIFICATION Managers also try to stimulate sales by improving quality, features, or style. *Quality improvement* increases functional performance by launching a "new and improved" product. *Feature improvement* adds size, weight, materials, supplements, and accessories

TABLE 8.1 Alternate Ways to Increase Sales Volume

Expand the Number of Users	Increase the Usage Rates Among Users
<ul style="list-style-type: none"> Convert nonusers. The key to the growth of air freight service was the constant search for new users to whom air carriers can demonstrate the benefits of using air freight rather than ground transportation. 	<ul style="list-style-type: none"> Have consumers use the product on more occasions. Serve Knorr soup for a healthy snack. Use Heinz vinegar to clean windows.
<ul style="list-style-type: none"> Enter new market segments. When Goodyear decided to sell its tires via Walmart, Sears, and Discount Tire, it immediately boosted its market share. 	<ul style="list-style-type: none"> Have consumers use more of the product on each occasion. Drink a larger glass of orange juice.
<ul style="list-style-type: none"> Attract competitors' customers. Marketers of <i>Hindustan Times</i> are always wooing <i>Times of India</i> customers. 	<ul style="list-style-type: none"> Have consumers use the product in new ways. Use Tums antacid as a calcium supplement.

that expand the product's performance, versatility, safety, or convenience. *Style improvement* increases the product's esthetic appeal. Any of these can attract consumer attention.

MARKETING PROGRAM MODIFICATION Finally, brand managers might also try to stimulate sales by modifying nonproduct elements—price, distribution, and communications in particular. They should assess the likely success of any changes in terms of effects on new and existing customers.

Marketing Strategies: Decline Stage

Sales decline for a number of reasons, including technological advances, shifts in consumer tastes, and increased domestic and foreign competition. All can lead to overcapacity, increased price cutting, and profit erosion. The decline might be slow, as for sewing machines and newspapers, or rapid, as for 5.25 floppy disks and eight-track cartridges. Sales may plunge to zero or petrify at a low level. These structural changes are different from a short-term decline resulting from a marketing crisis of some sort. "Marketing Insight: Managing a Brand Crisis," describes strategies for a brand in temporary trouble.

As sales and profits decline over a long period of time, some firms withdraw. Those remaining may reduce the number of products they offer, withdrawing from smaller segments and weaker trade channels, cutting marketing budgets, and reducing prices further. Unless strong reasons for retention exist, carrying a weak product is often very costly.

Marketing Insight

Managing a Brand Crisis

Marketing managers must assume a brand crisis will someday arise. Whole Foods, Taco Bell, JetBlue, and toy and pet food brands have all experienced potentially crippling brand crises, and AIG, Merrill Lynch, and Citi were rocked by investment lending scandals that eroded consumer trust. Widespread repercussions include (1) lost sales, (2) reduced effectiveness of marketing activities for the product, (3) increased sensitivity to rivals' marketing activities, and (4) reduced impact of the firm's marketing activities on competing brands.

In general, the stronger brand equity and corporate image are—especially credibility and trustworthiness—the more likely the firm can weather the storm. Careful preparation and a well-managed crisis management program, however, are also critical. As Johnson & Johnson's nearly flawless handling of the Tylenol product-tampering incident suggests, the key is that consumers see the firm's response as both *swift* and *sincere*. They must feel an immediate sense that the company truly cares. Listening is not enough.

The longer the firm takes to respond, the more likely consumers can form negative impressions from unfavorable media coverage or word of mouth. Perhaps worse, they may find they don't like the brand after all and permanently switch. Getting in front of a problem with PR, and perhaps ads, can help avoid those problems.

Consider Perrier. In 1994, Perrier was forced to halt production worldwide and recall all existing product when traces of benzene, a known carcinogen, were found in excessive quantities in its bottled water. Over the next weeks it offered several explanations, creating confusion and skepticism. Perhaps more damaging, the product was off shelves for over three months. Despite an expensive relaunch featuring ads and promotions, the brand struggled to regain lost market share, and a full year later sales were less than half what they had been. With its key "purity" association tarnished, Perrier had no other compelling points-of-difference. Consumers and retailers had found satisfactory substitutes, and the brand never recovered. Eventually it was taken over by Nestlé SA.

Second, the more sincere the firm's response—a public acknowledgment of the impact on consumers and willingness to take necessary steps—the less likely consumers will form negative attributions. When consumers reported finding shards of glass in some jars of its baby food, Gerber tried to reassure the public there were no problems in its manufacturing plants but adamantly refused to withdraw products from stores. After market share slumped from 66 percent to 52 percent within a couple of months, one company official admitted, "Not pulling our baby food off the shelf gave the appearance that we aren't a caring company."

Greyser, "The Perrier Recall: A Source of Trouble," Harvard Business School Case #9-590-104 and "The Perrier Relaunch," Harvard Business School Case #9-590-130; Harald Van Heerde, Kristiaan Helsen, and Marnik G. Dekimpe, "The Impact of a Product-Harm Crisis on Marketing Effectiveness," *Marketing Science* 26 (March–April 2007), pp. 230–45; Michelle L. Roehm and Alice M. Tybout, "When Will a Brand Scandal Spill Over and How Should Competitors Respond?" *Journal of Marketing Research* 43 (August 2006), pp. 366–73; Michelle L. Roehm and Michael K. Brady, "Consumer Responses to Performance Failures by High Equity Brands," *Journal of Consumer Research*, 34 (December 2007), pp. 537–45; Alice M. Tybout and Michelle Roehm, "Let the Response Fit the Scandal," *Harvard Business Review*, December 2009, pp. 82–88; Andrew Pierce, "Managing Reputation to Rebuild Battered Brands," *Marketing News*, March 15, 2009, p. 19; Kevin O'Donnell, "In a Crisis Actions Matter," *Marketing News*, April 15, 2009, p. 22.

Besides being unprofitable, weak products consume a disproportionate amount of management's time, require frequent price and inventory adjustments, incur expensive setup for short production runs, draw advertising and sales force attention better used to make healthy products more profitable, and cast a negative shadow on company image. Failing to eliminate them also delays the aggressive search for replacement products, creating a lopsided product mix long on yesterday's breadwinners and short on tomorrow's.

Unfortunately, most companies have not developed a policy for handling aging products. The first task is to establish a system for identifying them. Many companies appoint a product-review committee with representatives from marketing, R&D, manufacturing, and finance who, based on all available information, makes a recommendation for each product—leave it alone, modify its marketing strategy, or drop it.⁵⁴

Some firms abandon declining markets earlier than others. Much depends on the height of exit barriers in the industry.⁵⁵ The lower the barriers, the easier for firms to leave the industry, and the more tempting for the remaining firms to stay and attract the withdrawing firms' customers. Procter & Gamble stayed in the declining liquid-soap business and improved its profits as others withdrew.

The appropriate strategy also depends on the industry's relative attractiveness and the company's competitive strength in it. A company in an unattractive industry that possesses competitive strength should consider shrinking selectively. A company in an attractive industry that has competitive strength should consider strengthening its investment. Companies that successfully restage or rejuvenate a mature product often do so by adding value to it.

Strategies for harvesting and divesting are quite different. *Harvesting* calls for gradually reducing a product or business's costs while trying to maintain sales. The first step is to cut R&D costs and plant and equipment investment. The company might also reduce product quality, sales force size, marginal services, and advertising expenditures, ideally without letting customers, competitors, and employees know what is happening. Harvesting is difficult to execute, yet many mature products warrant this strategy. It can substantially increase current cash flow.⁵⁶

When a company decides to divest a product with strong distribution and residual goodwill, it can probably sell the product to another firm. Some firms specialize in acquiring and revitalizing "orphan" or "ghost" brands that larger firms want to divest or that have encountered bankruptcy. These firms attempt to capitalize on the residue of awareness in the market to develop a brand revitalization strategy. If the company can't find any buyers, it must decide whether to liquidate the brand quickly or slowly. It must also decide how much inventory and service to maintain for past customers.

Evidence for the Product Life-Cycle Concept

Table 8.2 summarizes the characteristics, marketing objectives, and marketing strategies of the four stages of the product life cycle. The PLC concept helps marketers interpret product and market dynamics, conduct planning and control, and do forecasting. One recent study of 30 product categories unearthed a number of interesting findings concerning the PLC:⁵⁷

- New consumer durables show a distinct takeoff, after which sales increase by roughly 45 percent a year, but they also show a distinct slowdown, when sales decline by roughly 15 percent a year.
- Slowdown occurs at 34 percent penetration on average, well before most households own a new product.
- The growth stage lasts a little over eight years and does not seem to shorten over time.
- Informational cascades exist, meaning people are more likely to adopt over time if others already have, instead of by making careful product evaluations. One implication is that product categories with large sales increases at takeoff tend to have larger sales declines at slowdown.

Critique of the Product Life-Cycle Concept

PLC theory has its share of critics, who claim life-cycle patterns are too variable in shape and duration to be generalized, and that marketers can seldom tell what stage their product is in. A product may appear mature when it has actually reached a plateau prior to another upsurge. Critics also charge that, rather than an inevitable course, the PLC pattern is the self-fulfilling result of marketing strategies, and that skillful marketing can in fact lead to continued growth.⁵⁸

TABLE 8.2

Summary of Product Life-Cycle Characteristics, Objectives, and Strategies

	Introduction	Growth	Maturity	Decline
Characteristics				
Sales	Low sales	Rapidly rising sales	Peak sales	Declining sales
Costs	High cost per customer	Average cost per customer	Low cost per customer	Low cost per customer
Profits	Negative	Rising profits	High profits	Declining profits
Customers	Innovators	Early adopters	Middle majority	Laggards
Competitors	Few	Growing number	Stable number beginning to decline	Declining number
Marketing Objectives				
	Create product awareness and trial	Maximize market share	Maximize profit while defending market share	Reduce expenditure and milk the brand
Strategies				
Product	Offer a basic product	Offer product extensions, service, warranty	Diversify brands and items models	Phase out weak products
Price	Charge cost-plus	Price to penetrate market	Price to match or best competitors'	Cut price
Distribution	Build selective distribution	Build intensive distribution	Build more intensive distribution	Go selective: phase out unprofitable outlets
Communications	Build product awareness and trial among early adopters and dealers	Build awareness and interest in the mass market	Stress brand differences and benefits and encourage brand switching	Reduce to minimal level needed to retain hard-core loyals

Weber, "Planning Corporate Growth with Inverted Product Life Cycles," *Long Range Planning* (October 1976), pp. 12–29; Peter Doyle, "The Realities of the Product Life Cycle," *Quarterly Review of Marketing* (Summer 1976).

Market Evolution

Because the PLC focuses on what's happening to a particular product or brand rather than the overall market, it yields a product-oriented rather than a market-oriented picture. Firms also need to visualize a *market's* evolutionary path as it is affected by new needs, competitors, technology, channels, and other developments and change product and brand positioning to keep pace.⁵⁹ Like products, markets evolve through four stages: emergence, growth, maturity, and decline. Consider the evolution of the paper towel market.

Paper Towels Homemakers originally used cotton and linen dishcloths and towels in their kitchens. Then a paper company looking for new markets developed paper towels, crystallizing a latent market that other manufacturers entered. The number of brands grew and created market fragmentation. Industry overcapacity led manufacturers to search for new features. One manufacturer, hearing consumers complain that paper towels were not absorbent, introduced "absorbent" towels and increased its market share. Competitors produced their own versions of absorbent paper towels, and the market fragmented again. One manufacturer introduced a "superstrength" towel that was soon copied. Another introduced a "lint-free" towel, subsequently copied. The latest innovation is wipes containing a cleaning agent (like Clorox Disinfecting Wipes) that are often surface-specific (for wood, metal, stone). Thus, driven by innovation and competition, paper towels evolved from a single product to one with various absorbencies, strengths, and applications.

Marketing in an Economic Downturn

Given economic cycles, there will always be tough times, such as 2008–2010 in many parts of the world. Despite reduced funding for marketing programs and intense pressure to justify them as cost effective, some marketers survived—or even thrived—in the recession. Here are five guidelines to improve the odds for success during an economic downturn.

Explore the Upside of Increasing Investment

Does it pay to invest during a recession? Although the severity of the recent downturn took firms into uncharted territory, 40 years of evidence suggests those willing to invest during a recession have, on average, improved their fortunes when compared with those that cut back.⁶⁰

The amount of investment isn't all that matters. Firms that received the most benefit from increasing marketing investments during a recession were often those best able to exploit a marketplace advantage such as an appealing new product, a weakened rival, or development of a neglected target market. With such strong evidence, marketers should consider the potential upside and positive payback of an increased investment that seizes market opportunities. Here are two companies that made such a decision.

- General Mills increased marketing expenditures for the 2009 fiscal year by 16 percent, increased revenues by 8 percent to \$ 14.7 billion, and increased its operating profit by 4 percent. As CEO Ken Powell explained, “In an environment where you have consumers going to the grocery store more often and thinking more about meals at home, we think that is a great environment for brand building, to remind consumers about our products.”⁶¹
- UK supermarket giant Sainsbury launched an advertising and in-store point-of-sale campaign called “Feed Your Family for a Fiver” that played off its corporate slogan, “Try Something New Today,” to encourage shoppers to try new recipes that would feed families for only £5.

Get Closer to Customers

In tough times, consumers may change what they want and can afford, where and how they shop, even what they want to see and hear from a firm. A downturn is an opportunity for marketers to learn even more about what consumers are thinking, feeling, and doing, especially the loyal customer base that yields so much of a brand's profitability.⁶²

Firms should characterize any changes as temporary adjustments versus permanent shifts.⁶³ In explaining why it is important to look forward during a recession, Eaton CEO Alex Cutler noted, “It is a time when businesses shouldn’t be assuming that the future will be like the past. And I mean that in virtually every dimension whether it is economic growth, value propositions, or the level of government regulation and involvement.”⁶⁴

The potential value and profitability of some target consumers may change. Marketers should evaluate this factor to fine-tune their marketing program and capitalize on new insights. After unsuccessfully chasing twenty-somethings with trendier clothing, Old Navy refocused its message to target a budget-conscious mom shopping for herself and the family.⁶⁵

Review Budget Allocations

Budget allocations can be sticky and not change enough to reflect a fluid marketing environment. We've seen repeatedly that the vast penetration of the Internet, improved functionality of the cell phone, and increased importance of events, experiences, and emotions as marketing opportunities have dramatically changed the marketing communications and channels environment in just five years.

A recession provides an opportunity for marketers to closely review how much and in what ways they are spending their money. Budget reallocations can open up promising new options and eliminate sacred-cow approaches that no longer provide sufficient revenue benefits. Underperforming distributors can be weeded out and incentives provided to motivate the more effective product sellers.

Put Forth the Most Compelling Value Proposition

One mistake in a recession is to be overly focused on price reductions and discounts, which can harm long-term brand equity and price integrity. Marketers should increase—and clearly communicate—the value their brands offer, making sure consumers appreciate all the financial, logistical, and psychological benefits compared with the competition.⁶⁶ The more expensive the item, the more important this value framing becomes.

Marketers should also review pricing to ensure it has not crept up over time and no longer reflects good value. Procter & Gamble adopted a “surgical” approach to reducing prices in specific categories in which its brands were perceived as costing too much compared with competitive products. At the same, it launched communications about the innovativeness and value of its many other brands to help ensure consumers would continue to pay their premium prices.⁶⁷

Fine-tune Brand and Product Offerings

Marketers must ensure they have the right products to sell to the right consumers in the right places and times. They can review product portfolios and brand architecture to confirm that brands and sub-brands are clearly differentiated, targeted, and supported based on their prospects. Luxury brands can benefit from lower-priced brands or sub-brands in their portfolios. Take Armani as an example.

Armani Armani differentiates its product line into three tiers distinct in style, luxury, customization, and price. In the most expensive, Tier I, it sells Giorgio Armani and Giorgio Armani Privé, custom-made couture products that sell for thousands of dollars. In Tier II, it offers Emporio Armani—young, modern, more affordable styles—and Armani jeans that convey technology and ecology. In lower-priced Tier III are more youthful and street-savvy translations of Armani style, AIX Armani Exchange, sold at retail locations in cities and suburban malls. The brand architecture has been carefully devised so each extension lives up to the core promise of the Armani brand without diluting the parent's image. But clear differentiation also exists, minimizing consumer confusion and brand cannibalization. In tough economic times, the lower end picks up the selling slack and helps maintain profitability.

Because different brands or sub-brands appeal to different economic segments, those that target the lower end of the socioeconomic spectrum may be particularly important during a recession. Value-driven companies are likely to benefit most. Bad times also are an opportunity to prune brands or products with diminished prospects. In the recession following the 9/11 tragedy, Procter & Gamble divested many stagnant brands such as Comet cleanser, Folgers coffee, Jif peanut butter, and Crisco oil and shortening, to concentrate on higher-growth opportunities with much success.

Summary

1. A market leader has the largest market share in the relevant product market. To remain dominant, the leader looks for ways to expand total market demand and attempts to protect and perhaps increase its current share.
2. A market challenger attacks the market leader and other competitors in an aggressive bid for more market share. There are five types of general attack; challengers must also choose specific attack strategies.
3. A market follower is a runner-up firm willing to maintain its market share and not rock the boat. It can play the role of counterfeiter, cloner, imitator, or adapter.
4. A market nicher serves small market segments not being served by larger firms. The key to nichemanship is specialization. Nichers develop offerings to fully meet a certain group of customers' needs, commanding a premium price in the process.
5. As important as a competitive orientation is in today's global markets, companies should not overdo the emphasis on competitors. They should maintain a good balance of consumer and competitor monitoring.
6. Because economic conditions change and competitive activity varies, companies normally must reformulate

- their marketing strategy several times during a product's life cycle. Technologies, product forms, and brands also exhibit life cycles with distinct stages. The life cycle stages are usually introduction, growth, maturity, and decline. Most products today are in the maturity stage.
7. Each product life cycle stage calls for different marketing strategies. The introduction is marked by slow growth and minimal profits. If successful, the product enters a growth stage marked by rapid sales growth and increasing profits. There follows a maturity stage in which sales growth slows and profits stabilize. Finally,

the product enters a decline stage. The company's task is to identify the truly weak products, develop a strategy for each, and phase them out in a way that minimizes impact on company profits, employees, and customers.

8. Like products, markets evolve through four stages: emergence, growth, maturity, and decline.
9. In a recession, marketers must explore the upside of possibly increasing investments, get closer to customers, review budget allocations, put forth the most compelling value proposition, and fine-tune brand and product offerings.

Applications

Marketing Debate

Do Brands Have Finite Lives?

Often, after a brand begins to slip in the marketplace or disappears altogether, commentators observe, "All brands have their day," implying brands have a finite life and cannot be expected to be leaders forever. Other experts contend brands can live forever, and that their long-term success depends on marketers' skill and insight.

Take a position: Brands cannot be expected to last forever versus There is no reason for a brand to ever become obsolete.

Marketing Discussion

Industry Roles

Pick an industry. Classify firms according to the four different roles they might play: leader, challenger, follower, and nicher. How would you characterize the nature of competition? Do the firms follow the principles described in this chapter?

Marketing Excellence

>>Samsung

Korean consumer electronics giant Samsung has made a remarkable transformation, from a provider of value-priced commodity products that original equipment manufacturers (OEMs) sold under their own brands, to a global marketer of premium-priced Samsung-branded consumer electronics such as flat-screen TVs, digital cameras, digital appliances, semiconductors, and cell phones. Samsung's high-end cell phones have been a growth engine for the company, which has also released a steady stream of innovations, popularizing the PDA phone, the first cell phone with an MP3 player, and the first Blu-ray disc player.

Samsung initially focused on volume and market domination rather than profitability. However, during the Asian financial crisis of the late 1990s, when other Korean chaebols collapsed beneath a mountain of debt, Samsung

took a different approach. It cut costs and reemphasized product quality and manufacturing flexibility, which allowed its consumer electronics to go from project phase to store shelves within six months. Samsung invested heavily in innovation and focused intently on its memory-chip business, which established an important cash cow and rapidly made the company the largest chip maker in the world. The company continued to pour money into R&D during the 2000s, budgeting \$40 billion for 2005–2010. Its focus on R&D and increasing digital convergence have let Samsung introduce a wide range of electronic products under its strong brand umbrella. The firm also partnered with longtime market leader Sony to create a \$2 billion state-of-the-art LCD factory in South Korea and signed a milestone agreement to share 24,000 basic patents for components and production processes.

Samsung's success has been driven not only by successful product innovation, but also by aggressive brand building over the last decade. From 1998 to 2009, the company spent over \$7 billion in marketing, sponsored

six Olympics, and ran several global ad campaigns themed "Imagine," "Quietly Brilliant," and "YOU," all which included brand messages such as "technology," "design," and "sensation" (human). In 2005, Samsung surpassed Sony in the Interbrand brand ranking for the first time and continues to outperform Sony today.

The economic downturn during 2008 and 2009 significantly affected the semiconductor industry, overall consumer electronics sales, and Samsung's bottom line. To survive, Samsung slashed profit margins, decreased production, and cut inventories. As a result, the company emerged at the end of 2009 with record-high quarterly profits despite significantly smaller profit margins.

Today, Samsung is the global leader in flat-panel TVs and memory chips, and the number two player in mobile phones. It is focused on growing technologies such as smart phones and has partnered with both Microsoft's Windows Mobile and Google's Android software. In addition, Samsung has formed a green partnership with Microsoft to help create energy-efficient computers.

Unlike rival firms, Samsung has become a global leader by making both components for electronics products and the actual devices sold to consumers,

and without acquiring major competitors. It has more than doubled its employees from a decade ago to over 164,000 around the world. With record sales of \$110 billion in 2008, the company's CEO, Lee Yoon-woo, announced the firm hopes to hit \$400 billion in revenue by the year 2020. To accomplish this aggressive goal, Samsung will explore areas like health care and home energy products.

Questions

1. What are some of Samsung's greatest competitive strengths?
2. Samsung's goal of \$400 billion in sales by 2020 would bring it to the same level as Walmart. Is this feasible? Why or why not?

LG v. Samsung," *Economist*, January 24, 2009.

Marketing Excellence

>>IBM

International Business Machines Corporation (IBM) manufactures and sells computer hardware and software, offers infrastructure services, and provides global consulting services. It dates to the 1880s but became known as IBM only in 1924, under the leadership of then-president Thomas J. Watson Sr. Watson led IBM for four decades and helped establish some of its most successful and continuing business tactics, such as exceptional customer service, a professional and knowledgeable sales force, and a focus on large-scale, custom-built solutions for businesses. Watson also created the company's first slogan, "THINK," which quickly became a corporate mantra.

From the 1910s to the 1940s, IBM's growth exploded, led primarily by sales of tabulating machines, which helped underpin the Social Security system in the 1930s, and of war-related technologies developed for the military during World War I and World War II.

IBM evolved in the 1950s when Watson's son, Thomas J. Watson Jr., took over as CEO. It was under his management that the company paved the way for innovations in computation. IBM worked with the

government during the Cold War and built the air-defense SAGE computer system at the price of \$30 million. In 1964, the firm launched a revolutionary large family of computers called the System/360, which used interchangeable software and peripheral equipment. For it to succeed, however, IBM had to cannibalize its own computer product lines and move its current systems to the new technology. Fortunately the risk paid off, and IBM architecture became the industry standard. By the 1960s, IBM was producing approximately 70 percent of all computers, beating out early competitors General Electric, RCA, and Honeywell.

The 1980s—the beginning of the personal computing era—were pivotal for IBM. In 1981, the firm launched the first personal computer, which offered 18KB of memory, floppy disk drives, and an optional color monitor. IBM also opened up new channels of distribution through companies like Sears and ComputerLand. However, its decision to outsource components of the PC to companies like Microsoft and Intel marked the end of IBM's monopoly in computing. During the 1980s, its market share and profits eroded as the PC revolution changed the way consumers viewed and bought technology. IBM's sales dropped from \$5 billion in the early 1980s to \$3 billion by 1989. The dip continued into the early 1990s when IBM felt pressure from Compaq and Dell and attempted to split the

company into smaller business units to compete. The results were disastrous, and IBM posted net losses of \$16 billion between 1991 and 1993.

Things turned around when a new CEO, Louis Gerstner, refocused the company in a new strategic direction. Gerstner reconnected the company's business units, shed its commodity products, and focused on high-margin businesses like consulting and middleware software. IBM then introduced the iconic ThinkPad, which helped regain lost share. To rebuild its brand image, the firm consolidated its marketing efforts from 70 advertising agencies to 1 and created a consistent, universal message. In 1997, IBM's chess-playing computer system, Deep Blue, also helped lift IBM's brand image by defeating the world's reigning chess champion in a historic event that captured the attention of millions.

At the turn of the 21st century, IBM's newest CEO, Samuel Palmisano, led IBM to new levels of success in the wake of the dot-com bust. He moved the company further away from hardware by selling its ThinkPad division to Lenovo and exiting disk drives. In addition, Palmisano embraced global consulting and data analytics by acquiring close to 100 firms, including PricewaterhouseCoopers.

IBM now focuses on solving the world's most challenging high-tech problems, such as better water management, lower traffic congestion, and collaborative health care solutions. Its most recent campaign, entitled "Smarter planet," highlights a few of the company's

accomplishments to date and explores IBM's ideas for the future. Palmisano explained, "We are looking at huge problems that couldn't be solved before. We can solve congestion and pollution. We can make the grids more efficient. And quite honestly, it creates a big business opportunity."

Today, IBM is the largest and most profitable information technology company in the world, with over \$103 billion in sales and 388,000 employees worldwide. It employs scientists, engineers, consultants, and sales professionals in over 170 countries and holds more patents than any other U.S.-based technology company. From 2000 to 2008, IBM spent over \$50 billion on R&D; and approximately 30 percent of its annual R&D budget goes toward long-term research.

Questions

1. Few companies have had such a long history of ups and downs as IBM. What were some of the keys to its recent success? Can its plans to solve some of the world's most challenging problems succeed? Why or why not?
2. Who are IBM's biggest competitors today, and what risks do they face with their current strategy?
